

EPI Spot to Edible Hedge

The Ecosystem Solution Institute will work with you over three years to evolve your front yard to an Edible Hedge. We do this through a series of sponsored 5 ft x 5 ft edible spots.

In order to be eligible for a multi-year sponsorship, homeowners must site their initial spot parallel to their front yard's sidewalk, 2 ft to 5ft from the sidewalk for easy perimeter mowing, and centered or aligned left or right for future expansion. Depending on how you site your first spot your spots on eitherside will either be focused on: tea plants, or berry bushes, and then in the third year another fruit tree. This patterning allows space for plants to grow and share sunlight.

Properties with 25ft frontage could have as many as five spots, but the one adjacent to the edges of driveways must be tea plants. So the pattern in your yard could look like this: tea guild, fruit tree guild, berry guild, fruit tree fuild, tea guild.

The Example Design Shows 3 Spots: Underwood Plum Guild, Berry Guild, Toka Plum Guild with room for tea plants to finish a 25 ft edible hedge
